

Mythos-Ready Security Program

AI has compressed the window between vulnerability discovery and weaponization from weeks to hours. The time-to-exploit disclosed CVEs has fallen from 2.3 years in 2018 to **less than one day** in 2026. Cyber programs must adapt at machine speed and scale. Your current patch cycles, response processes, and risk metrics were not built for this.

The recently released strategy briefing from the Cloud Security Alliance (CSA), SANS Institute, and OWASP “**Building a Mythos-Ready Security Program**” is a call to action to address the accelerating threat. SRA brings the expertise, and strategy to help organizations prepare, operationalize, and scale for the new normal.

CSA’s 11 Recommended Priorities

Point AI Agents at Your Code	Require AI Agent Adoption	Innovation Governance	Defend Your Agents	Prepare for Continuous Patching	Stand Up VulnOps
Update Risk Models	Inventory & Reduce Attack Surface	Harden Your Environment	Build Deception Capability	Build Automated Response	

Our Approach

Assessment

- Evaluate your program using the CSA’s diagnostic questions and risk register including current VulnOps systems and processes.
- Assess AI adoption, agent governance, and pipeline security
- Understand crown jewels and their exposure to supply chain compromises

Testing

- Conduct a technical TTX and review incident response playbooks for multi-simultaneous N/O-day events
- Use offensive AI to assess Internet-facing and crown jewel app code
- Test segmentation, egress, and lateral movement

Roadmap

- Deliver a prioritized 90-day action plan with Board-ready briefing materials
- Recommend solutions for each identified gap
- Establish baseline metrics for ongoing measurement of Mythos-readiness

Related Program Support

- AI Applications Red Teaming
- AI Program governance review
- Continuous security testing program support
- CI/CD security assessment
- Benchmarked Purple Teaming
- Cloud, ESXi, K8s specialized configuration testing
- SCALR AI agentive security operations workflows
- SCALR XDR 24x7 service
- SCALR Sight VulnOps visibility program build and platform
- Microsoft Defender Suite and Sentinel deployment and tuning

About SRA

Delivering world class services from:

United States

Ireland

Australia

Since 2010 Security Risk Advisors has been a highly-specialized consulting firm with solutions to cybersecurity’s emerging problems. We are technical and engaging. We have a passion for recruiting and training the next generation of cybersecurity practitioners. We help you upgrade your process, tech, and humans for the AI world.
